

Volume 1: Light and Color, Instructor Materials

Table of Contents

Contents	Page No.
I. Introduction	
A. Overview of the Unit	1-2
B. Acknowledgments and Origins of Ideas	3
C. General Safety Considerations	3
II. Students' Notions about Light and Color	
A. Students' Prior Beliefs as Described in the Research on Student Conceptions	3-5
B. Conceptions that Students Should Develop	6-7
III. Cognitive Rationale	8-10
IV. Instructor Notes	
A. Equipment List	11-12
B. List of Student Investigations/Activities	13-15
C. Suggested Sequence of Activities, Focus on Science, and Homework	16-18
D. Student Activities with Embedded Instructor Notes	
<i>Investigation L1: Light and Illumination</i>	19-20
Activity L1.1: How does light leave a bulb?	21-26
Activity L1.2: What are shadows?	27-30
Activity L1.3: What happens to the shadow if there is more than one source of light?	31-34
Activity L1.4: What can a pinhole do?	35-38
<i>Investigation L2: Reflection of Light</i>	39-40
Activity L2.1: Can you always see mirror reflections?	41-44
Activity L2.2: How does light reflect from a mirror?	45-50
Activity L2.3: Does light reflect from paper?	51-54
Activity L2.4: How can you read a paper if it's hidden from your direct view?	55-56
<i>Investigation L3: Refraction and Real Images</i>	57-58
Activity L3.1: What does a lens do?	59-62
Activity L3.2: How does light change direction when passing through a transparent material?	63-70
Activity L3.3: What are some properties of a lens?	71-78
<i>Investigation L4: The Eye and Achromatic Vision</i>	79-80
Activity L4.1: What are some of the properties of your eye?	81-84, 86 85
Activity L4.2: How can we build a model for vision?	87-92
Activity L4.3: What do eyeglasses do?	93-96
Activity L4.4: How can different shades of gray be printed?	97-100

<i>Investigation L5: Images that Cannot Be Formed on Screens</i>	101-102
Activity L5.1: Where are your eyes focusing when you look at a mirror image?	103-104
Activity L5.2: How does a mirror work?	105-108
Activity L5.3: How can you see more of yourself?	109-112
Activity L5.4: Why do objects seem displaced when viewed through transparent materials?	113-118
<i>Investigation L6: Color Addition and Color Vision</i>	119-120
Activity L6.1: What happens when colored lights are overlapped?	121-126
Activity L6.2: How can you produce a montage of colored shadows?	127-130
Activity L6.3: What do the rules of color addition suggest about color vision?	131-136
Activity L6.4: How are so many different colors produced on television screens and printed pictures?	137-140
Activity L6.5: What are some other interesting visual effects?	141-146
<i>Investigation L7: Color Filters</i>	147-148
Activity L7.1: What happens when colored filters are overlapped?	149-154
Activity L7.2: How does a printer produce all those colors?	155-158
E. Focus on Science	159-160
Focus on Science L1.1: Light and Illumination	161-162
Focus on Science L1.2: Pinholes and Reproduction Patterns of Illumination	163-164
Focus on Science L2.1: Reflection of Light	165-166
Focus on Science L3.1: Refraction of Light	167
Focus on Science L3.2: Properties of Lenses	168
Focus on Science L4.1: The Eye and Vision	169-170
Focus on Science L5.1: Mirror Images	171-172
Focus on Science L5.2: Virtual Images Caused by Refraction	173
Focus on Science L6.1: Color Addition and Color Vision	174
Focus on Science L6.2: More about Color Vision	175
Focus on Science L7.1: Producing Colors with Filters	176
F. Homework	177-178
Homework L1.1: Complex Shadows	179-180
Homework L2.1: Mirrors	181-182
Homework L3.1: Prisms	183
Homework L3.2: Can a mirror form an image?	184
Homework L4.1: Vision Model	185
Homework L5.1: Virtual Images in Mirrors	186
Homework L5.2: Virtual Images–Refraction	187
Homework L6.1: Color Images from Television Screens	188
Homework L7.1: Color Filters	189-190
G. Sample Assessment	191-193
	194
	195-198
H. List of References for Light and Color	199
