

Elena Yudovina

U.S. Physics Team Coach

Nordson CyberOptics

Minneapolis, MN

I'm a 3D Computer Vision Engineer at Nordson CyberOptics in Minneapolis, MN. As a high schooler, I got a gold medal from IPhO 2004; I was a junior coach for the physics team in 2007 and 2008. After that I got a BA (in math) from Harvard, a PhD (in math) from Cambridge, and did a postdoc and a half (in math) at University of Michigan and University of Minnesota before jumping ship to industry. For the last four years I've been writing algorithms that try to compensate for optical aberrations of microscope-like sensors. Outside of work, I have two young time-consuming hobbies (also known as children), and fantasize about doing more hiking, knitting, and rock-climbing.
